

Less aerosol. More comfort.

VivaDent®
Aerosol Reduction
Gel

To reduce spray mist and aerosols,
for ultrasonic scaling

We have thought of everything. Especially of you.

We know the challenges and risks involved in professional tooth cleaning. With VivaDent® Aerosol Reduction Gel, we have created an innovation for ultrasonic scaling^[1] that makes your every day prophylaxis work noticeably easier.

Up to
99%
less aerosol^[2]

The power of innovation.

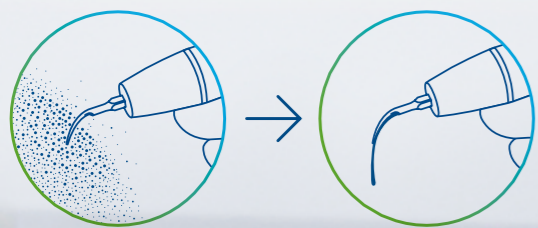

- ✓ **Less aerosol. Better visibility.**
Better visibility of the treatment area during ultrasonic scaling.
- ✓ **Less aerosol. More protection.**
The likelihood of spreading airborne diseases and cross-contamination is effectively minimized by reducing the spray mist.
- ✓ **Less aerosol. More satisfaction.**
The product provides a more comfortable experience for patients due to less splatter on the face; their make-up remains nearly unaffected and glasses stay clean.
- ✓ **Less aerosol. Easy handling.**
VivaDent Aerosol Reduction Gel is an easy-to-use mix-in solution for all ultrasonic scalers with an external coolant tank. The gel is easy to dose and it is water-soluble.

[1] When using ultrasonic scalers, please observe the local and national hygiene guidelines and the manufacturer's instructions. The device must be rinsed with drinking water after ultrasonic scaling with the VivaDent Aerosol Reduction Gel. Only suitable for ultrasonic scalers with an external coolant tank. Not suitable for air-polishing devices.

[2] The gel reduces the aerosol produced by ultrasonic scalers by up to 99 per cent. The reduction of aerosol is dependent on the amplitude of the scaler tip.

Less aerosol. Better visibility.

The reduction of aerosol formation by ultrasonic scalers improves visibility of the treatment area. In addition, the dental mirror remains mostly unaffected from water spray during ultrasonic scaling. This makes professional tooth cleaning easier.

Ultrasonic scaler **without** Aerosol Reduction Gel

Ultrasonic scaler **with** Aerosol Reduction Gel

voclar

Less aerosol. More protection.

VivaDent® Aerosol Reduction Gel minimizes the likelihood of spreading airborne diseases effectively by reducing the spray mist.

VivaDent Aerosol Reduction Gel meets the requirements of dental hygienists and patients for a safe practice environment.

What it does

The aerosol produced by ultrasonic scalers is bound before it can form.

Protects you and your patients

The likelihood of spreading airborne diseases and cross-contamination is minimized by reducing the formation of aerosol.

Less aerosol. More satisfaction.

By reducing aerosol formation, the face remains drier during tooth cleaning, make-up is nearly unaffected and glasses stay clean. Patients have a more pleasant overall treatment experience. This increases comfort and all-round satisfaction.

Clear and stain-free

The water-based solution is clear. It does not cause stains on teeth, or permanent stains on clothes and other surfaces.

Gluten-free – lactose-free – vegan

Ivoclar meets the needs of patients by offering a 100 percent gluten-free, lactose-free and vegan product.

Less aerosol. Easy handling.

VivaDent® Aerosol Reduction Gel is an easy-to-use mix-in solution for all ultrasonic scalers with an external coolant tank. The gel is easy to dose and it is water-soluble.

The mixing bottles included in the starter kit are BPA-free and reusable.

Given its wide neck, the bottle is easy to clean and reuse. The odourless inner coating is free of harmful substances such as BPA or phthalates.

Single dose sachet with easy and practical one-hand opening

The sachet can be opened with just one hand, which makes it very convenient and practical to use.

No additional instruments required

VivaDent® Reduction Gel can be integrated into your existing treatment workflow without any additional effort. No additional instruments are required to reduce the formation of aerosol.

This is how it works:
